Nature 417:441-447(2002).

"I FUNCTION: CATALYZES THE FIRST STEP IN THE BIOSYNTHESIS OF 2-METHYLTHIO-NG-(DELTA(2)-ISOPENTENYL)-ADENOSINE (MS[2]I[6]A])
ADJACENT TO THE ANTICODON OF SEVERAL TRAM SPECIES (BY SIMILARITY).

"I CATALYTIC ACTIVITY: Isopentenyl diphosphate + tRNA = diphosphate + tRNA containing 6-isopentenyladenosine."

I SIMILARITY: BELONGS TO THE IPP TRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bentley S.D., Chater K.F., Cerdeno-Tarraga A.-M., Challis G.L., Thomson N.R., James K.D., Harris D.E., Quail M.A., Kieser H., Harper D., Bateman A., Brown S., Chandra G., Chen C.W., Collins M., Cronin A., Fraser A., Goble A., Hidalgo J., Hornsby T., Howarth S., Huang C.-H., Kieser T., Larke L., Murphy L., Oliver K., O'Neil S., Rabbinowitsch E., Rajandream M.A., Rutherford K., Rutter S., Seeger K., Saunders D., Sharp S., Squares R., Squares S., Taylor K., Warren T., Wietzorrek A., Woodward J., Barrell B.G., Parkhill J.,
